PROFESSIONAL PROFILE

Software architect and engineering leader with 30+ years across business-critical enterprise applications, systems integration, database engineering, and reliability. Nearly 20 years at Comerica Bank, including staff-level technical leadership. Currently architecting and validating an AI-assisted application using deterministic event processing, durable local capture, deferred transcription, and evidence-driven testing. Available for focused architecture assessments, troubleshooting, integration, and engineering engagements.

SELECTED ENGINEERING WORK

Architect / Engineering Lead | ShowPilot (independent project) *2026–Present*

- Designed modular event-ingestion and intelligence boundaries for an AI-assisted performer support application; separated source-specific adapters, retained state, and model-provider responsibilities.
- Directed development of a local-first recording workflow using durable append journaling, recoverable export, queued audio processing, and deferred transcription to protect time-critical capture under resource contention.
- Defined engineering acceptance criteria and validated system behavior through automated testing, instrumentation, deterministic replay, and controlled live field recordings.
- Directed AI-assisted implementation while retaining responsibility for system architecture, component interfaces, technical risk management, and evidence-based engineering acceptance.

Principal Software Engineer / Staff-level Technical Leader | Comerica Bank *Mar 2004–May 2023*

- Engineering lead for modernization of a mainframe-based teller platform into a web application deployed across approximately 500 U.S. branches; collaborated with software vendors and cross-functional stakeholders.
- Project budget exceeded $10 million; estimated annual direct savings and incremental sales opportunities exceeded $3 million (project estimates).
- Contributed to more than a dozen mission-critical development projects, applying systems design, enterprise integration, data engineering, troubleshooting, and technical leadership.
- Interviewed engineering candidates; trained and mentored developers and participated in cross-team engineering initiatives.

CONSULTING STRENGTHS

Architecture and workflow assessment • Failure analysis and recovery design • SQL and data integration • Legacy modernization • AI-assisted engineering governance • Testing, observability, and evidence-based recommendations

ADDITIONAL PROFESSIONAL EXPERIENCE

Technology & Business Development | Trilobite SAS | Bogotá, Colombia *2023–2025*

Participated in building a Bogotá-based digital business, including custom technology work, operations, and staff support. Active involvement concluded in 2025.

Development Lead | Healthmaster, LLC *Jun 2001–Nov 2003*

Led developers, testers, and support staff for an established web application; handled development oversight, staffing, training, and operational support.

Software Developer / Database Designer | Various technology organizations *1990–2003*

Delivered application and database work across automotive, broadband, healthcare, and other industries. Organizations included Ford Motor Company, Comcast, MediaOne Broadband, St. Joseph Health System, Paul Stolz Systems, and Standard Systems International.

TECHNICAL CAPABILITIES

ARCHITECTURE & DELIVERY

Enterprise application design, component boundaries, systems integration, fault isolation, architecture diagrams, software estimation, automated testing, operational validation, AI-assisted development workflows.

APPLICATION & DATA

C#, ASP.NET/.NET, SQL Server, T-SQL, stored procedures, triggers, SSIS, SSRS, DB2, Oracle, JavaScript, HTML/CSS, JSON, web services and integration patterns.

SYSTEMS & TOOLING

PowerShell, Windows services, Active Directory, Linux/UNIX shell scripting, Git/GitHub, browser-extension architecture, local-first persistence, event processing, and AI/LLM provider integration.

MILITARY SERVICE

Sonar Systems Technician / Supervisor | United States Navy, Submarine Force *May 1984–Sep 1990*

Honorably discharged as STS2(SS), E-5. Operated, maintained, and troubleshot AN/BQQ-5 sonar electronics aboard nuclear-powered attack submarines, including USS Honolulu and USS Bremerton. Specialized technical training, underway fault isolation, and supervisory responsibilities. Awarded the Navy Expeditionary Medal.

EDUCATION & TECHNICAL TRAINING

University of Michigan (1990–1993) • University of Hawaii (1987–1990) • U.S. Navy submarine, electronics, and sonar systems training (1984–1990)
